

MILESYN SXR ATF

MILESYN SXR ATF is a superior quality, new generation approved fluid for use in General Motors vehicles where Dexron VI or earlier Dexron products are specified. This fluid is designed for GM's new six-speed automatic transmissions and is also completely backward compatible for use in older GM vehicles that specify Dexron III H, Dexron III G, Dexron II D, Dexron II or Dexron fluids. This fluid has shown outstanding performance in friction durability, shear and oxidation stability and has proven to enhance the performance of older transmissions. Longer service life, superior foam resistance, minimization of deposits and consistent shift performance can be achieved through the use of Dexron VI. Dexron VI also meets most major pump manufacturer's requirements and Denison Hydraulics HF-0 specification. This fluid is approved by General Motors under license number J-60155.

Property	ASTM	Typical value
Density, @ 15°C	D4052	.849
Color		Red
Flash Point, COC °C	D92	230
Viscosity, Cst @ 40°C	D445	30.05
Viscosity, Cst @ 100°C	D445	6.02
Viscosity Index	D2270	152
Viscosity, cP @ -40°C	D2983M	11,600
Pour Point, °C	D97	-50
